Trading Range
Measures the distance (in standard deviations) that each stock is trading above or below its 50-day moving average. When the circle is in the non-shaded zone it is neutral (N). When it is in the light or dark red zones it is considered overbought (OB), while the light or dark green zones indicate an oversold (OS) stock. For each stock, the tail next to the circle represents the level it was at one week ago, while the color indicates whether the stock has moved up (green) or down (red) relative to its range.
